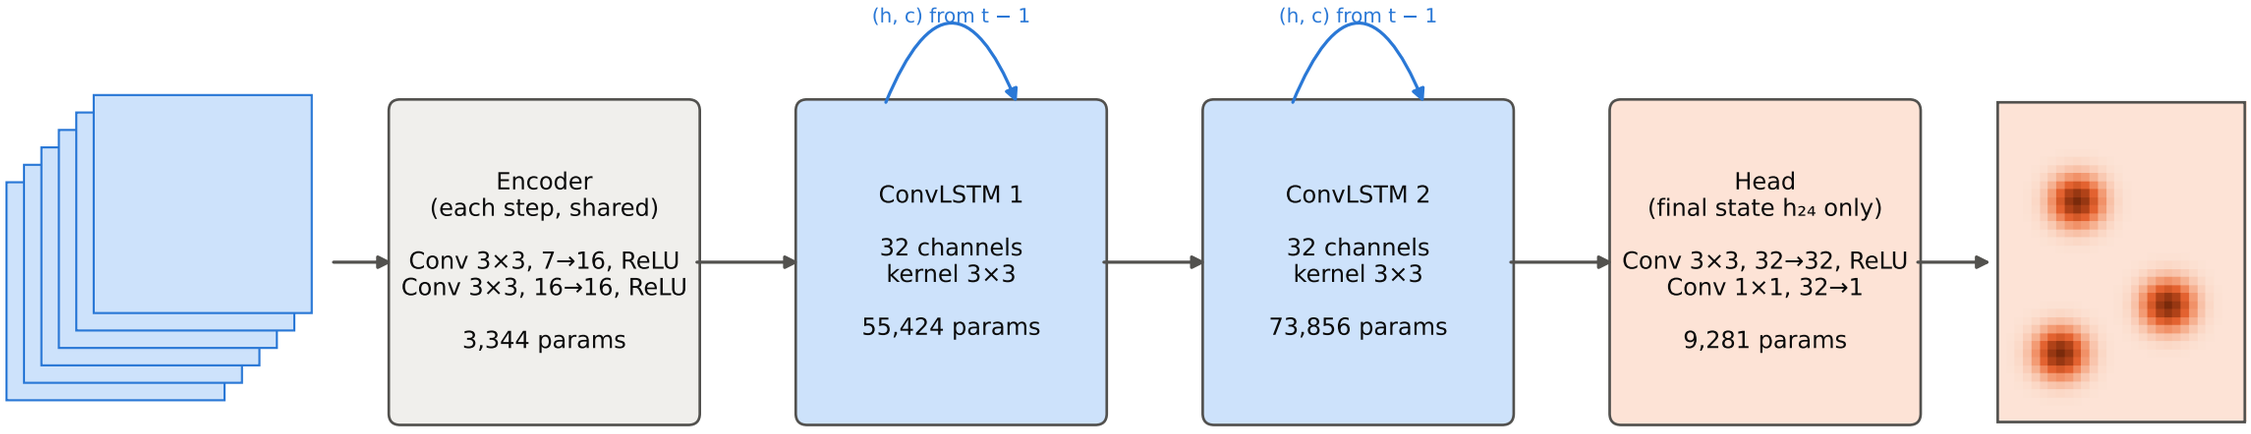
ConvLSTM ignition-heatmap model (convlstm_v1, 141,905 parameters)

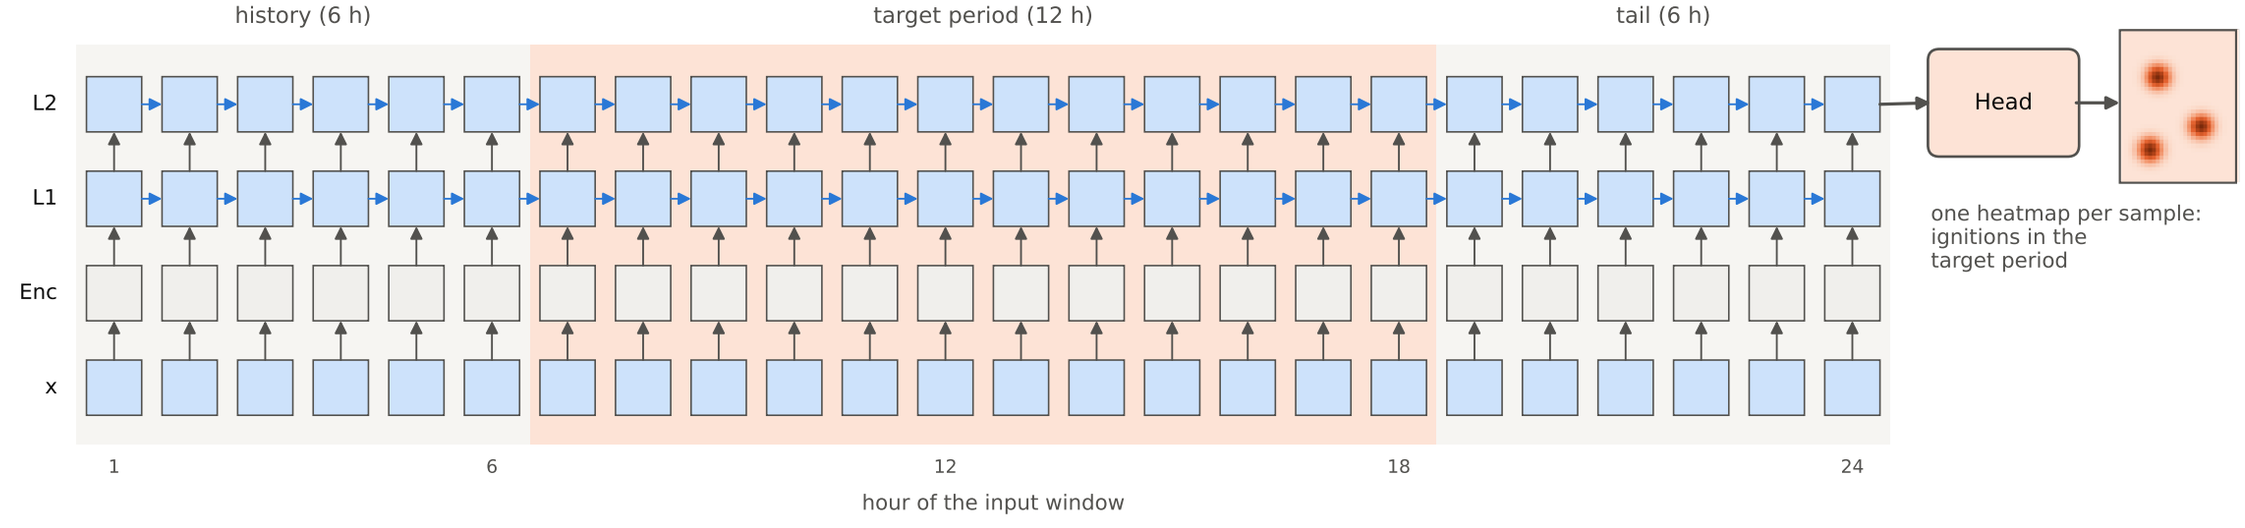


Input sequence
24 hourly steps × 7 channels × H × W

FRP · confidence · detected
period flag · time · mainland · persistent

Ignition heatmap
sigmoid, H × W
(schematic)

Training
32 × 32 crops (targets + hard negatives, random flips)
focal loss vs. Gaussian targets (σ = 1 px), ignore weights

Inference
full grid 177 × 106 → 3×3 peaks with p ≥ 0.05, top 50
→ sub-pixel points → matched to ICNF within 5 / 10 km


Unrolled over the 24 hourly steps of one sample (24 h window)
